

General Description

The EC4302 is a low dropout current regulator rated for 350mA/250mA constant sink current. The constant sink current will ensure that the same amount of power is applied to the power LED and consequently maintain the uniform brightness throughout the possible voltage variations from the power source. The IC also features low quiescent current and is typically at 212uA. This will minimize the power consumption from the IC itself. The IC has EN function built-in for applications where EN function or Dim function is needed. Please contact us directly if EN function is required. EC4302 is presently available in low profile SOT-89-3L and TO252 packages.

Thermal Considerations

It is important that the thermal limit of the package is not exceeded. The EC4302 has built-in thermal protection. When the thermal limit is exceeded, the IC will enter protection, and V_{OUT} will be pulled to ground .The power dissipation for a given application can be calculated as following:

The power dissipation (P_D) is P_D = I_{OUT} * [V_{IN} – V_{OUT}]

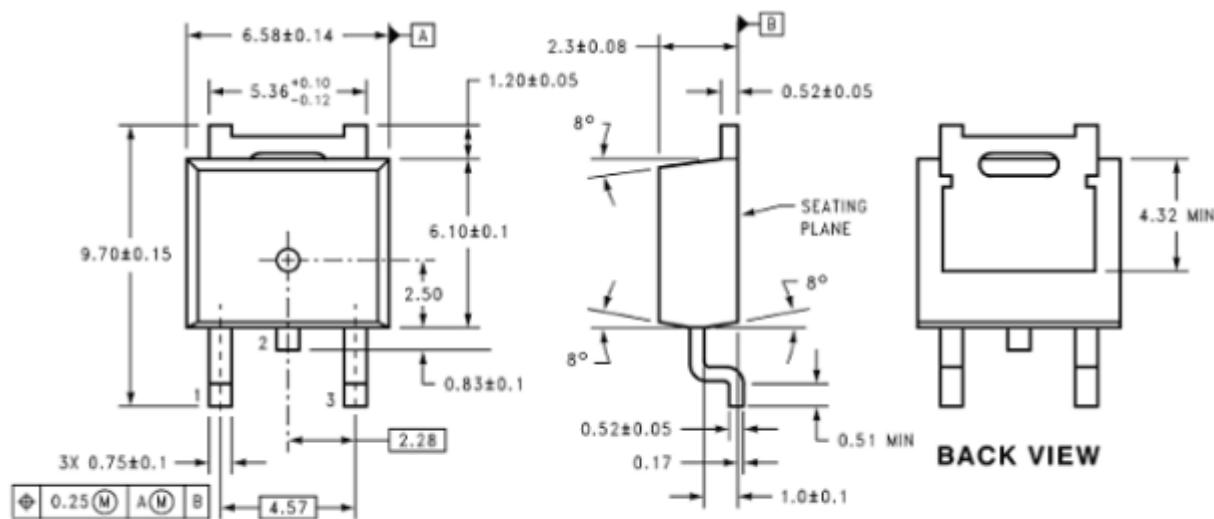

The thermal limit of the package is then limited to P_{D(MAX)} = [T_J – T_A]/Θ_{JA} where T_J is the junction temperature ,T_A is the ambient temperature, and Θ_{JA} is around 180°C/W for EC4302. EC4302 is designed to enter thermal protection at 150°C. For example, if T_A is 25°C then the maximum P_D is limited to about 0.7W. In other words, if I_{OUT(MAX)} = 350mA, then [V_{IN} – V_{OUT}] cannot exceed 2V.
