

## General Description

The ELP3100 DC/DC converter integrates two low noise , high efficiency charge pumps for dual outputs ,which consist of one inverting output and a step-up output. The device operates from 2.5 V to 4.8V input, and provides a step-up output voltage (VP) of 2x the input voltage . The negative inverting output (VN) is-1x inverted from the positive output VP. The ELP3100 is available in a small TDFN-12 pin package that features a bottom side exposed thermal pad to provide optimal heat dissipation . The small package size and low external parts count make the device ideally suit able for TFT LCD applications of mobile products . The device is rated to operate from – 40°C to +85°C ambient temperature range .

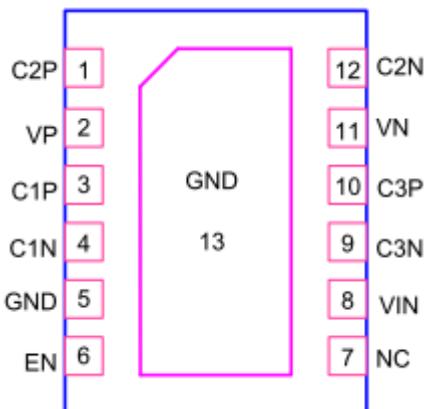

## Features

- ◆ Ultra -low – Noise for RF Application.
- ◆ 2.5 V to 4.8 V Input Supply Voltage Range.
- ◆ Adaptive 1.5x / 2x mode switch over for positive. voltageand-1xmodefornegativevoltage.
- ◆ VP output range : 5.4V to 5.9V.
- ◆ VN output range : -5.4V to -5.9V.
- ◆ High current output : Vin = 3.3V,lout =±120mA;
- ◆ Built in Power On Sequence.
- ◆ TDFN-12 1.5mmX2.4mm Package

## Applications

- ◆ Mobile Device , Smart Phone.
- ◆ Portable Media Players / MP3 players.
- ◆ Cellular and Smart mobile phone.
- ◆ LCD

## Pin Assignments

## Pin Description

Pin No.	Pin Name	Description
1	C2P	Flying Capacitor 2 Positive Terminal (C5).
2	VP	Positive output pin .
3	C1P	Flying Capacitor 1 Positive Terminal (C4).
4	C1N	Flying Capacitor 1 Negative Terminal (C4).
6	EN	Device Enable pin.
7	NC	No connector.
8	VIN	Input Supply Voltage . By pass VIN with a low ESR ceramic capacitor to GND.
9	C3N	Flying Capacitor 3 Negative Terminal (C6).
10	C3P	Flying Capacitor 3 Positive Terminal (C6).
11	VN	Negative output pin.
12	C2N	Flying Capacitor 2 Negative Terminal (C5).
5,13(Pad)	GND	Ground pin .

## Typical 120mA Application Circuit

## Absolute Maximum Ratings

◆ Input / Output Voltage to GND	—0.3V to +6V
◆ EN to GND	0V to $V_{IN}$
◆ Operating Junction Temperature Range( $T_J$ )	-40°C to 150°C
◆ Maximum Soldering Temperature(atleads,10sec)	260°C
◆ Storage Temperature Range	-65°C to 150°C
◆ Operation Ambient Temperature Range	0°C to 85°C
◆ Maximum Power Dissipation( $PD, TA < 40^\circ\text{C}$ )	1.5W
◆ Thermal Resistance( $JA$ )	68°C/W

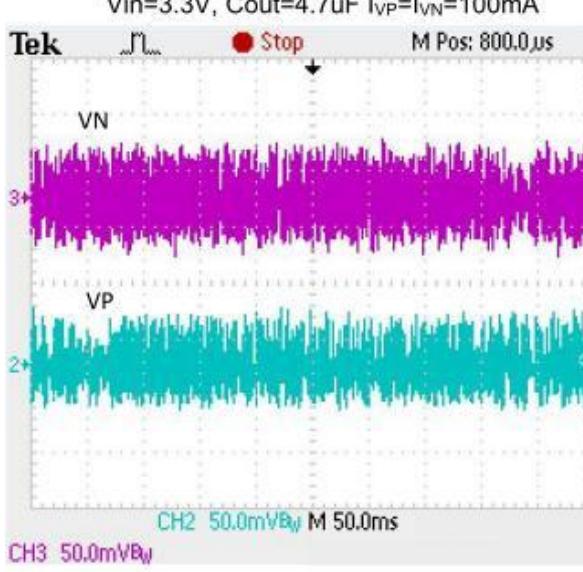

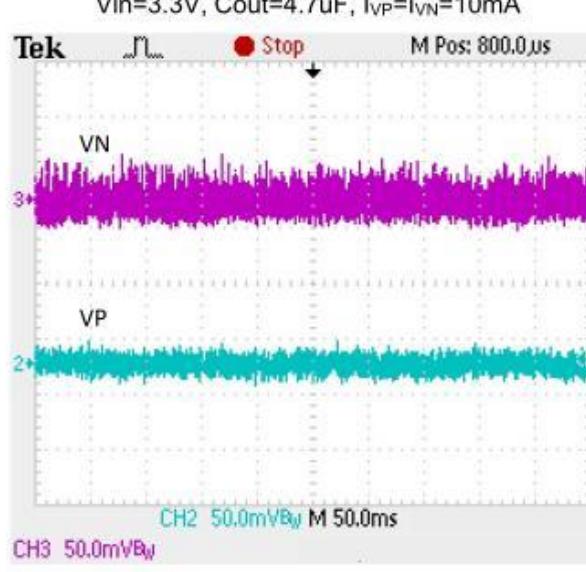

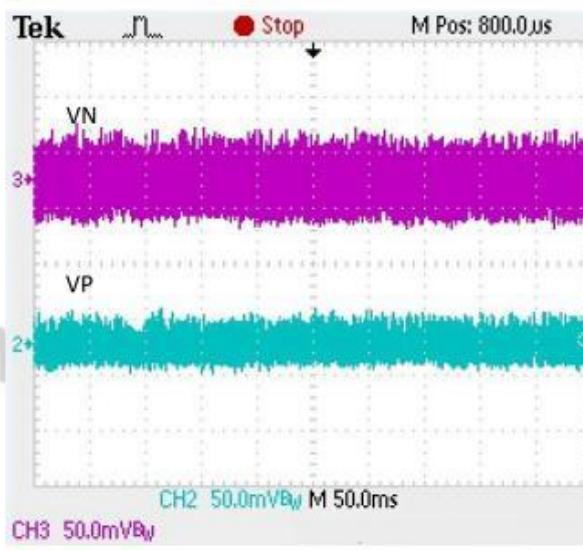

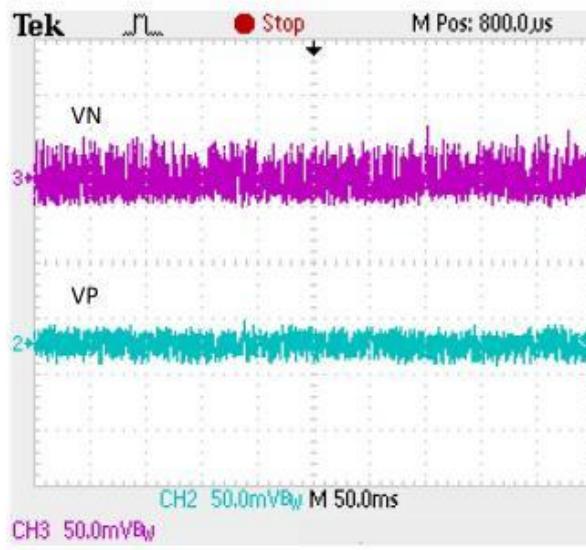

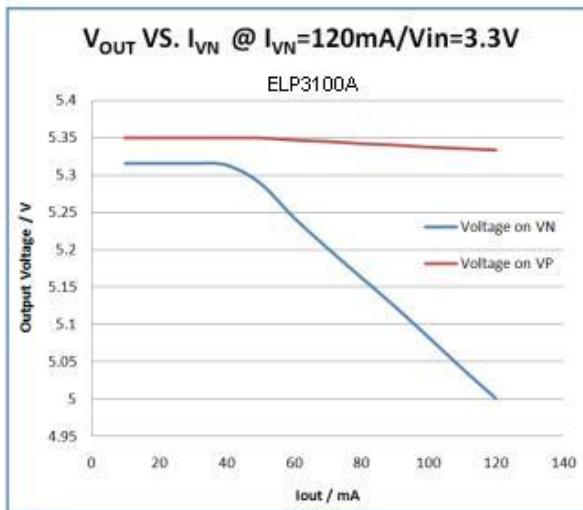

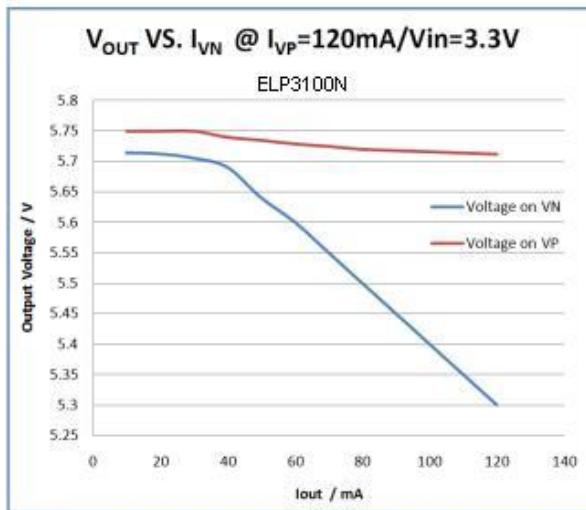

## Electrical Characteristics

( $V_{IN}=V_{EN}$ ,  $C_1=C_2=C_3=10\mu\text{F}$ ,  $C_4=C_5=C_6=4.7\mu\text{F}$ , Typical values are  $T_A=25^\circ\text{C}$ )

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Unit
VIN	Input Voltage		2.5		4.8	V
IO	Output Current	Positive Output Current		120		mA
		Negative Output Current		120		
VP	Positive Output Voltage	ELP3100	5.4		5.9	V
VN	Negative Output Voltage	ELP3100	-5.9		-5.4	
ISHDN	Shut down Current	EN=GND, $VIN=3.6V$			1	µA
FOSC	Oscillator Frequency	$IVP=IVN=10\text{mA}$		300		KHz
VOL	EN Logic Low				0.4	V
VOH	EN Logic High		1.4			V
IEN	EN Pin Current				0.5	uA
TSD	Thermal Shut down Temperature			145		°C

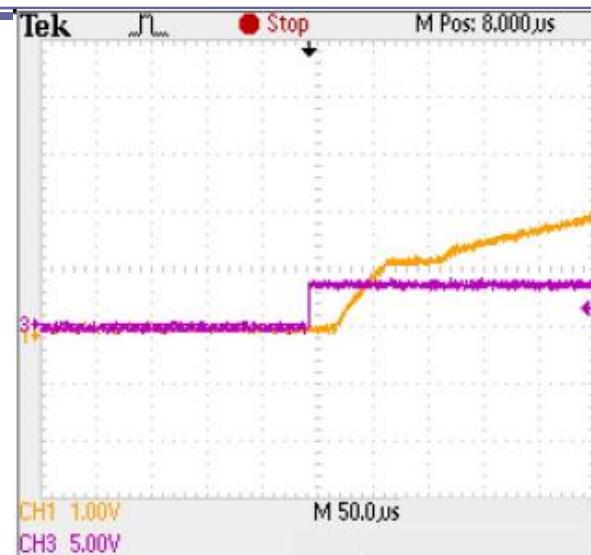

## Typical Operation Characteristics

## Dual Channel Charge Pump Power Solution For TFT LCD Panel

Start up Waveform with VN

## Application Information

The ELP3100 offers dual channel output voltage for powering on specified power in TFT LCD panels . The device integrates a positive charge pump and a Negative charge pump. Enable Control(EN) To turn on the ELP3100, the EN pin must be at logic high. When the EN pin is pulled to a logic low, the device is disabled and the supply current reduces to less than 1 $\mu$  A.

The ELP3100 positive charge pump provides an Output voltage  $VP$  of  $1.5x$  or  $2x$  the input voltage . The positive charge pump uses two external flying capacitors to generate the required output voltage . For the selected output to input ratio, the charge pump will configure the internal switches to charge the flying capacitors. Figure1shows the functional diagram of the positive charge pump .

### NegativeChargePumpController

The negative charge pump uses one external flying capacitor to generate an inverted negative voltage that is  $-1x$  of  $VP$ . Figure 2 shows the functional block diagram of the negative charge pump .

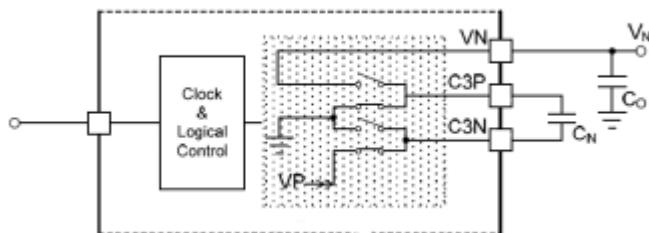

Figure 2. Negative Charge Pump Functional Block Diagram

## Layout Consideration

Use a ground plane for the ELP3100 device that can be connected to the device expose pad and ground pin for optimal thermal characteristics .

### By pass Capacitors

Place  $V_{IN}$ ,  $VP$ , and  $V_N$  by pass capacitors as close as possible to the device pin. Keep the ground traces from the by pass to the ground plane as short as possible.

## Flying Capacitors

Place the flying capacitors as close to the device pins as possible to minimize trace noise since the flying capacitors to the pins will generate high transient voltage ( $dv/dt$ ) switching signals .

## Package Information
